Dear Alexander Badelin,

We would like to thank you and LLC, Activity for your assistance with installing a 60m XHD Tall Tower from NRG Systems, Inc. The two engineers who oversaw the installation were very professional and have an extensive knowledge of the Tall Tower installation process.

Rostislav Achikasov supervised and assisted the tower assembly and erection. He was diligent and cautious through the whole process with the main focus on safety. He also trained site personnel on how to maintain the guy wires on the wind tower.

Vladimir Savransky assisted with assembly and erection of the tower and also installed and commissioned the instrumentation and data logger. He set up the Symphonie GSM modem quickly and without any issues. He has a complete understanding of the data logger supplied by NRG. He also trained site personnel in data retrieval and how to read the data logger in the field.

The work by the engineers from LLC, Activity was completed to a very high standard and we would recommend the service to anyone installing a wind tower.

Regards,

Colin Mackay,
